IDENTIFY THE SAFETY SYMBOLS ON THE PRODUCT

2. Using the information provided in each Safety Scenario, determine if the product involved should have a WHMIS or HHPS warning, and sketch the correct symbol that should be on the label.

Safety Scenario	WHMIS or HHPS?	Sketch the correct safety symbol that should be on the container of the product.
a) You are cleaning out the garage at home and you look at some of the empty bottles of antifreeze left over from the winter. The symbol states it is highly dangerous and poisonous.		
b) In the school office, you notice one of your teachers changing the toner in the photocopying machine. The new toner cartridge has a warning symbol suggesting that the material is poisonous and has immediate toxic effects.		
c) At a local hospital you see a truck deliver new oxygen tanks. These industrial sized tanks have large warning symbols on them suggesting that the gas inside is under high pressure.		
d) Wet weather is approaching and you decide it is time to protect your shoes with spray-on protectant. You look at the label and see a symbol suggesting you to be mildly cautious when you use the spray can as it could explode if put under the incorrect conditions.		
e) Your mother asks you to clean the bathtub and you look under the sink for the proper cleaner. The product you find tells you that you should wear rubber gloves if you have sensitive skin.		
f) You are walking on the beach and see that some garbage has washed onto the shore. You take a closer look and you see the bag is full of disposable syringes, needles and discarded latex gloves. The bag containing this waste has a large warning symbol on it.		
g) You are going camping for the weekend and decide to take along a small stove. On the way you stop at Canadian Tire and purchase a small bottle of propane. You are warned by the symbol on its label that it is very dangerous and may be flammable if put under the improper conditions.		
h) You enter a chemistry lab and you notice that the teacher has several chemical bottles out on the desk for a demonstration. One jar contains the element calcium. Your teacher tells you during the demonstration that the calcium will cause burns to body tissues if it comes into contact with them. As well, it also catches fire easily.
